

Threats, challenges and innovation technologies for sustainable balance between health of freshwater ecosystems, human health and wellbeing in urban contexts

07.12.2023 15:00 PM CET - 16:30 PM CET

Host: SYNYO GmbH

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Research Executive Agency. Neither the European Union nor the granting authority can be held responsible for them.

AGENDA

Key information

Time	Topic	Presenter
15:00 - 15:05	Introduction to the webinar and expected results	Alexander Nikolov SYNYO GmbH, Austria
15:05 - 15:15	OneAquaHealth project	Alexander Nikolov SYNYO GmbH, Austria
15:15 - 15:45	Standards Expert Talk: "Role of Standards & Technology in OneAquaHealth"	Dr. Maïke Luiken Chair, IEEE Planet Positive 2030, IEEE SA, USA Gora Datta HL7
15:45 - 16:00	ENORA Innovation	George Koutalieris Business and Innovation Officer at Enora Innovation, Greece
16:00 - 16:25	Open discussion	All participants
16:25 - 16:30	Final remarks	Alexander Nikolov SYNYO GmbH, Austria

HOUSEKEEPING RULES

The session will be **entirely recorded** and published on the OneAquaHealth Open Information Hub.

All participants except speakers and moderators will be **muted by default**.

Feel free to post your questions in the **chat**.

If you would like to **speak**, **raise your hand** and wait for the moderator to give you the floor.

FACTS AND FIGURES

Key information

Programme

Horizon Europe

Project Type

Research and Innovation Action

Project duration

48 months (01/01/2023 – 31/12/2026)

Partners

13 from 10 countries

Budget

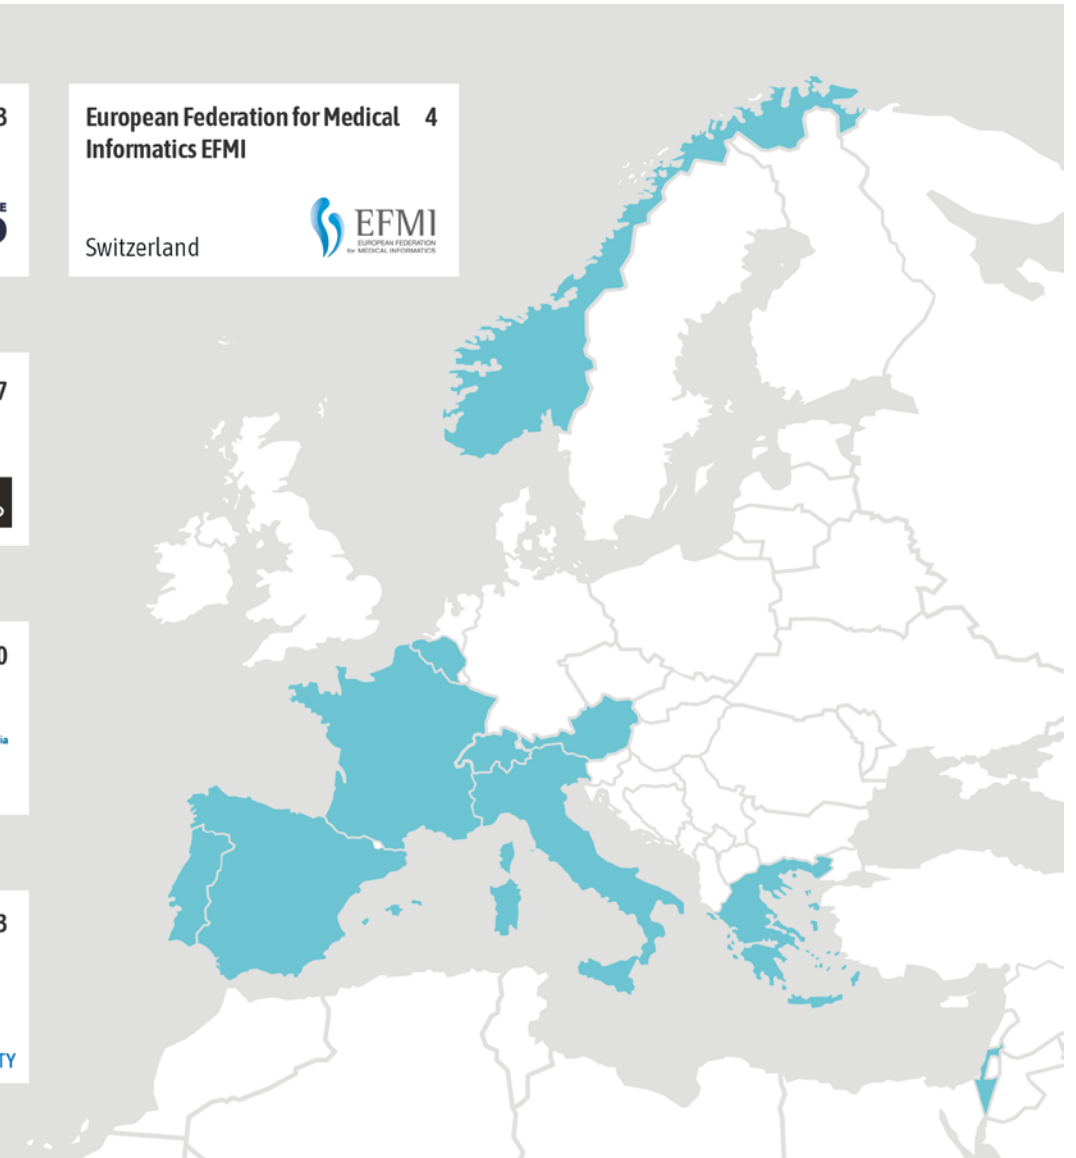

€4,939,558

Project is expected to (Extract)

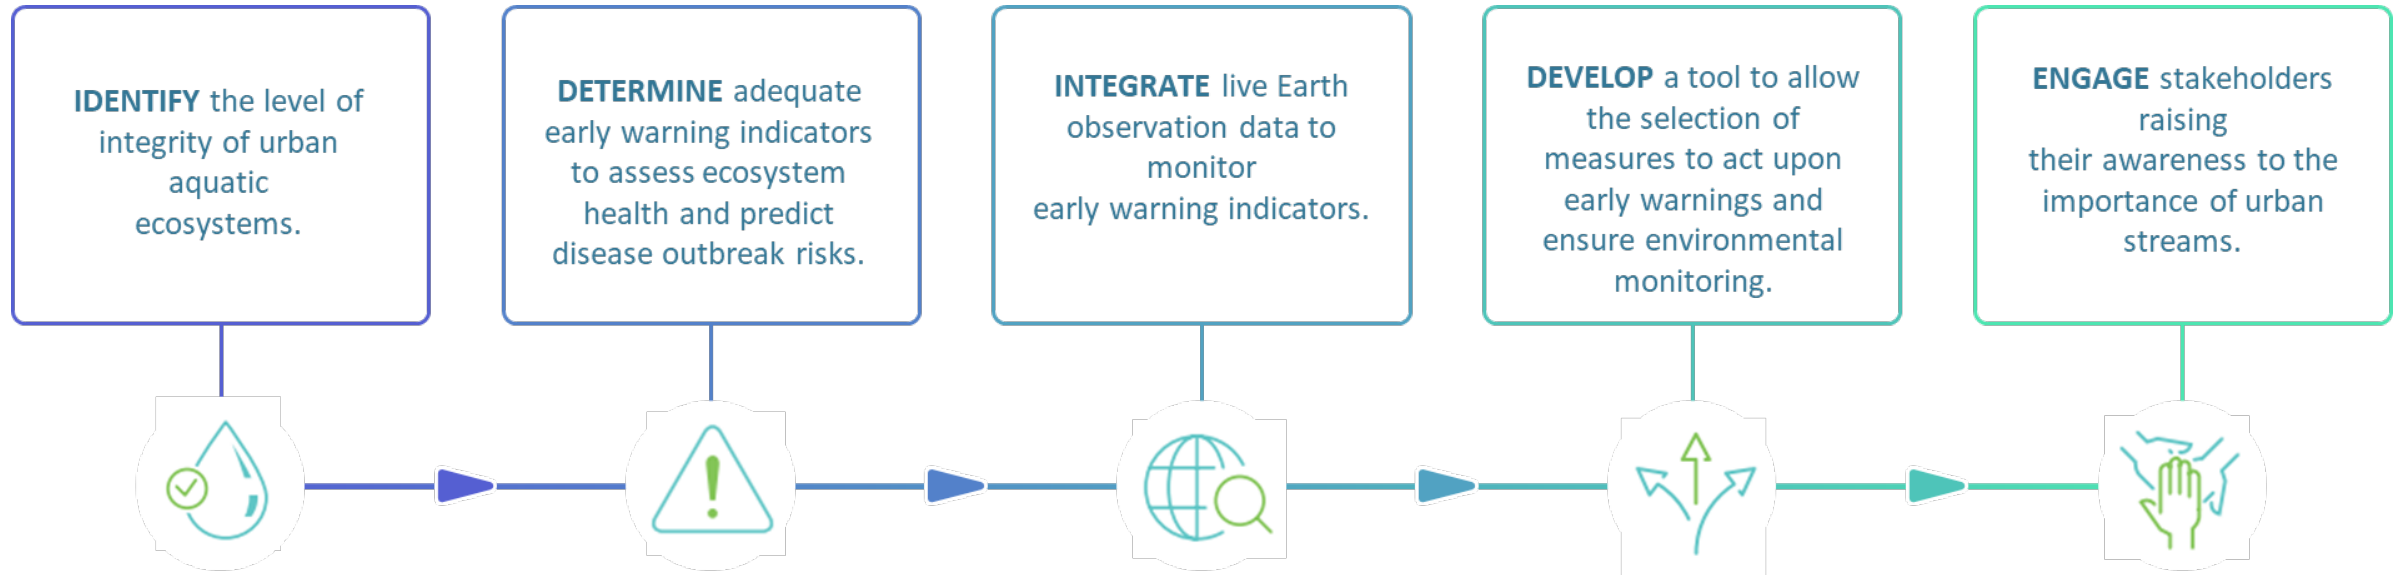

„ The proposal should build on the **holistic integrative concept of ‘One Health’** that includes not only the health of humans, but also of animals, soil and plants including ecosystems and environmental health. ”

„A specific focus of the proposal should be on the **monitoring of the evolution of ecosystem barriers in densely populated, industrialised or agricultural areas.** The proposal should also investigate how environmental observations could provide information that can contribute to improving the effectiveness, sustainability and resilience of these ecosystem barriers in facing emerging diseases. The proposal should **include the reanalysis of long time series of environmental observations and their correlation with the emergence or spread of diseases.**”

“It should also work on the **concept of alert or early warning systems** based on observation that would contribute informing governments and authorities, and finally operators, on the health risks related to the **destruction of ecosystems and biodiversity with a One Health approach**”

<p>University of Coimbra UC 1</p> <p>Portugal</p> 	<p>SHINE2Europe SHINE 2</p> <p>Portugal</p> 	<p>Institut National Polytechnique de Toulouse INPT 3</p> <p>France</p> 	<p>European Federation for Medical Informatics EFMI 4</p> <p>Switzerland</p>

Predictive models

The models will use machine learning approaches such as multilayer perceptron-artificial neural networks and discriminant function models. Their adaptation will require new machine learning methods.

Open Information Hub

The Hub will contain all the project information and allow the visualization of outputs and support tools for decision making.

City dashboards

The dashboards represent web applications that enable citizens and public institutions to access the data and their statistics through an optimized search graph and a graphical visualization.

Decision Support System (DSS)

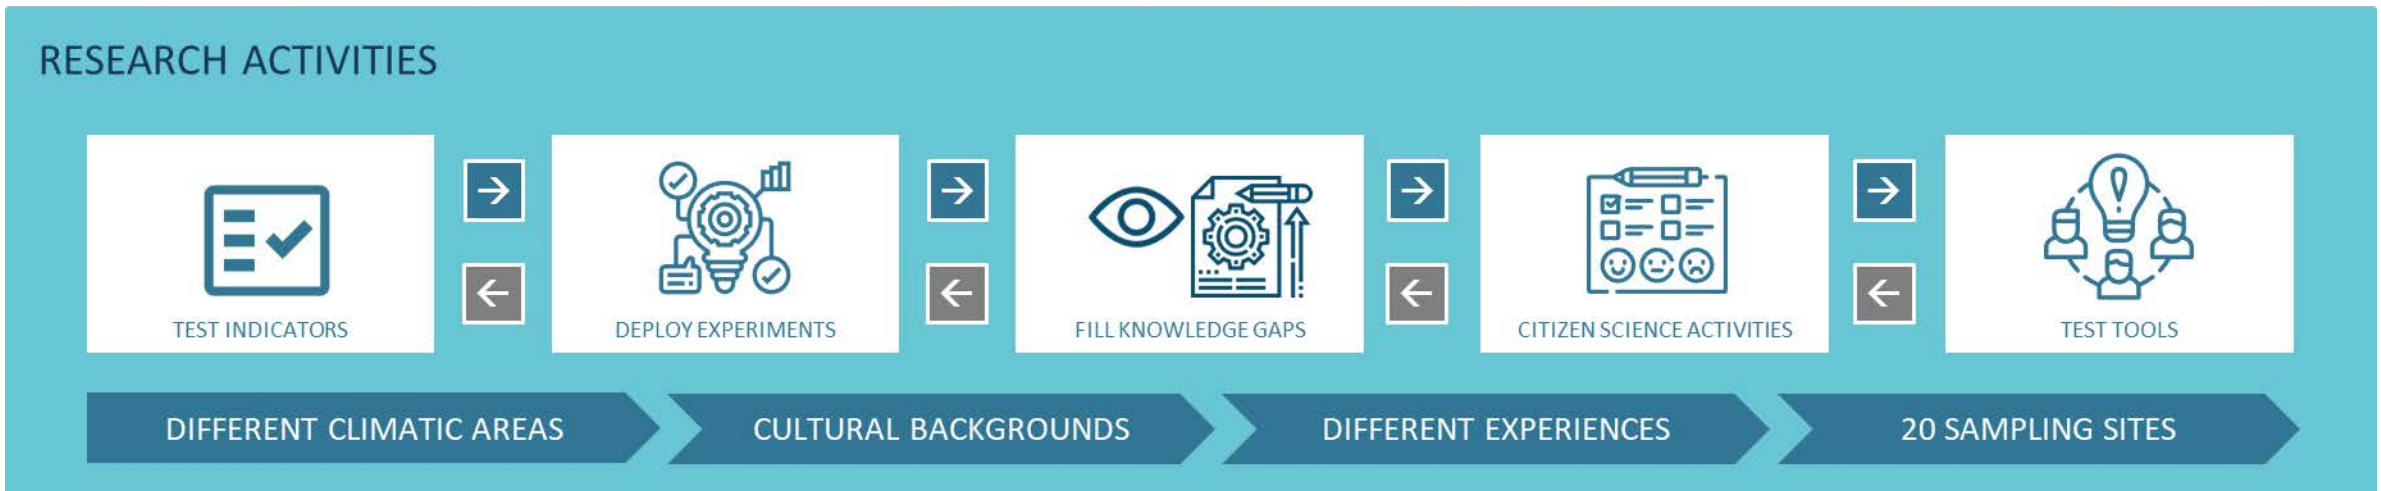

The DSS will be implemented through a web server system and use data provided by ESA's Copernicus Program and NASA's Landsat images. The DSS is based on R packages conceived to implement PROMETHEE methods and support the Multiple Criteria Decision Analysis (MCDA).

Citizen Science Application

A mobile and desktop application for environmental observation will be designed and supported by a back-office, which will enable citizens and public institutions to access data and statistics through an optimized search graph and a graphical visualization.

EXPECTED PROJECT IMPACTS

Better insights in how to foster the **use of environmental observation in** the large domain of **One Health** and the areas within this domain that could benefit the most from environmental and Earth observation.

An **increase of the capacity to trace environmental parameter changes** on how they impact on the emergence of diseases.

Monitoring of the evolution of ecosystem barriers and reinforcement of their sustainability, specifically in densely populated or intensively used areas.

Contributing to **understanding the emergence and tackling the spread of new infectious diseases** affecting human, animal or plant health, and the interlinkages that may exist between them and building up of more resilient ecosystems.

Better **insights into the concept of alert and early warning systems**, including, where possible, the next steps taken (e.g. exploitation/scaling up) in working with the outcomes of the EIC Horizon Prize on Early Warning for Epidemics.

Questions & Answers

Role of Standards & Technology: Why? For What? How?

IEEE STANDARDS ASSOCIATION
RAISING THE WORLD'S STANDARDS

Dr. Maïke Luiken

OneAquaHealth Webinar
Virtual, Dec 7, 2023

ADVANCING TECHNOLOGY FOR HUMANITY

ABOUT IEEE

- World's largest technical professional organization
- Trusted voice for engineering, computing and technology information around the globe
- Over 420,000 members in 190+ countries
- Inspiring a global community through its
 - Cited publications
 - Humanitarian work
 - Technical standards
 - **2,000+** Annual Conferences
 - **5M+** Technical Documents
 - **200+** Periodicals
 - **1,200+** Active Standards
 - **Global Public Policy**
 - **Global Humanitarian Efforts**
 - **Continuing Education & Certification**
 - **Ethics in Technology**

IMAGINE THE FUTURE WE CAN BUILD TOGETHER

Our Two “Impossible” Goals

Transform society and infrastructure to achieve Planet Positivity.

Identify the technological solutions we need to design, innovate and deploy to reach Planet Positive 2030.

Our Planet Positive 2030 Projects

Planet Positive 2030 Compendium:
Strong Sustainability by Design

Impact Accountability / Assessment Framework:
Accountable Sustainability by Design

-> Change how technology and standards are designed and created to prioritize planet and people first

Chair: Maike Luiken
IEEE SA Staff Lead: John C. Havens

Planet Positive 2030 Compendium: *Strong Sustainability by Design*

- Guiding Principles
- Metrics / Indicators
- Economics / Regulation
- Global Methodologies
- Ecosystems:
 - Forests and Trees
 - Rivers and Lakes
 - Towns and Cities
 - Ocean and Coasts
 - Farmlands and Grasslands, Mountains and Peatlands

Impact Accountability / Assessment Framework: *Accountable Sustainability by Design*

Measuring What Matters

- Utilizing **metrics** such as the UN SDGs and/or ESG metrics is how to best **measure progress** towards PP2030 goals.
- IEEE 7010™-2020 Standard - Wellbeing Impact Assessment (used in conjunction with tools like Basic Sustainability Assessment Tool (BSAT))”.

Impact Assessment Framework

- The Impact Assessment Framework will complement the Strong Sustainability by Design compendium and will be based on UN SDGs, ESGs and/or other available Impact Assessment tools (environmental, infrastructure, climate, ...) and reporting systems / templates.

- Water access rights are overly human centric as humans control access to many clean water sources through legal arrangements impacting numerous species, not just humans.
- Humans treat water as an endless resource that causes unnecessary waste, especially in regions where water is scarce or is under threat of becoming so.
- Community overexpansion can overtax water resources where the scaling effect, while seemingly efficient from a financial sense, may have the unexpected result of overtaxing available water resources.
- City infrastructure detracts from healthy river and lake ecosystems
- Excess fertilizer, pesticide, and animal waste pollute water sources and increase the chances for toxic harmful algal blooms (HABs).
- Water flow diversions disrupt critical ecosystems
- Growing water-intensive crops in arid zones accelerates water scarcity
- Physical trash/plastics pollute freshwater ecosystems and plays a significant role in ecosystem degradation and destruction
- Chemical and hazardous waste adversely affects river and lake ecosystems
- Raw human sewage pollution causes degradation of river and lake ecosystems
- Invasive species threaten freshwater ecosystems

-> Many of these issues affect human and animal health and wellbeing

Outcomes: Standards Development - Examples

- **P7800** Recommended Practice for Addressing Sustainability, Environmental Stewardship and Climate Change Challenges in Professional Practice:
<https://standards.ieee.org/ieee/7800/11039/>
- **P7801** Recommended Practice for Technical Knowledge Commons Initiatives and Platforms: <https://standards.ieee.org/ieee/7801/11197/>
- **P7802** Standard for Measurement and Verification of Reduction of Greenhouse Gases for Climate Action Projects and Solutions:
<https://standards.ieee.org/ieee/7802/11238>
- **P7803** Recommended Practice for Inclusive Sustainable Smart Cities:

You are invited to participate! Interested? Please contact: maike.luiken@ieee.org

IEEE SusTech Initiative

Sustainability Through Technology

The **IEEE SusTech Initiative** seeks to contribute technical expertise and solutions to address sustainability challenges, including climate change. This initiative is growing rapidly and new volunteers are always welcome.

In-person and virtual workshops are offered free of charge throughout the year. These fascinating, interactive workshops engage technical professionals and academics from around the world to map technology development needs according to gaps identified by the work of the Planet Positive 2030 Compendium.

STANDARDS:

An unseen force behind technological innovation and adoption.

You can't see standards, but they are at work behind the scenes everyday.

From device to device, network to network, across borders and around the world, almost all products, services and technologies in use today are created, connected or enabled in some way by standards.

WHAT IS A STANDARD?

Standards are published documents that establish technical specifications and procedures designed to maximize the reliability of the materials, products, methods, and/or services people use every day.

A standard can be thought of as an agreed-upon norm used by people, industry, and government that outlines the best way to complete a task – whether it's about developing a product, providing a service, controlling a process, or interacting with the world.

Technology standards can also provide a framework that enables devices from different manufacturers to communicate with one another

WHY ARE STANDARDS IMPORTANT?

Standards help ensure products are:

- ✓ Reliable
Secure
Safe
- ✓ Compatible
Interoperable
- ✓ Efficient
Scaleable

Standards enable technologies to work seamlessly, fostering smooth operations across industries and markets, and helping to build consumer trust.

Standards create mutual understanding by distributing knowledge and common guidance across industries and markets so products and services can be designed and manufactured to work together in a safe, secure, interoperable, compatible, reliable, scaleable and efficient way.

WHO DEVELOPS STANDARDS?

Standards Development is a voluntary, cooperative and collaborative effort.

Standards development work engages a diverse set of participants. Participants may include Standards Development Organizations (SDOs) like IEEE SA, industry, government agencies, consumer groups and other stakeholders who are interested in creating standards based on mutual agreement or consensus.

IEEE SA invites diverse, global participation in standards development from:

PEOPLE
working in or engaged with many types of groups & organizations

- Industry Sectors, Groups & Companies
- Government Agencies & Authorities
- Academic Institutions
- Trade Associations
- Consumer Groups
- NGOs
- and MORE

PEOPLE
from all disciplines, experiences & backgrounds

- Innovators
- Engineers
- Technologists
- Researchers
- Ethicists
- Policymakers
- Industry Leaders
- Educators
- Consumers
- PEOPLE like you★

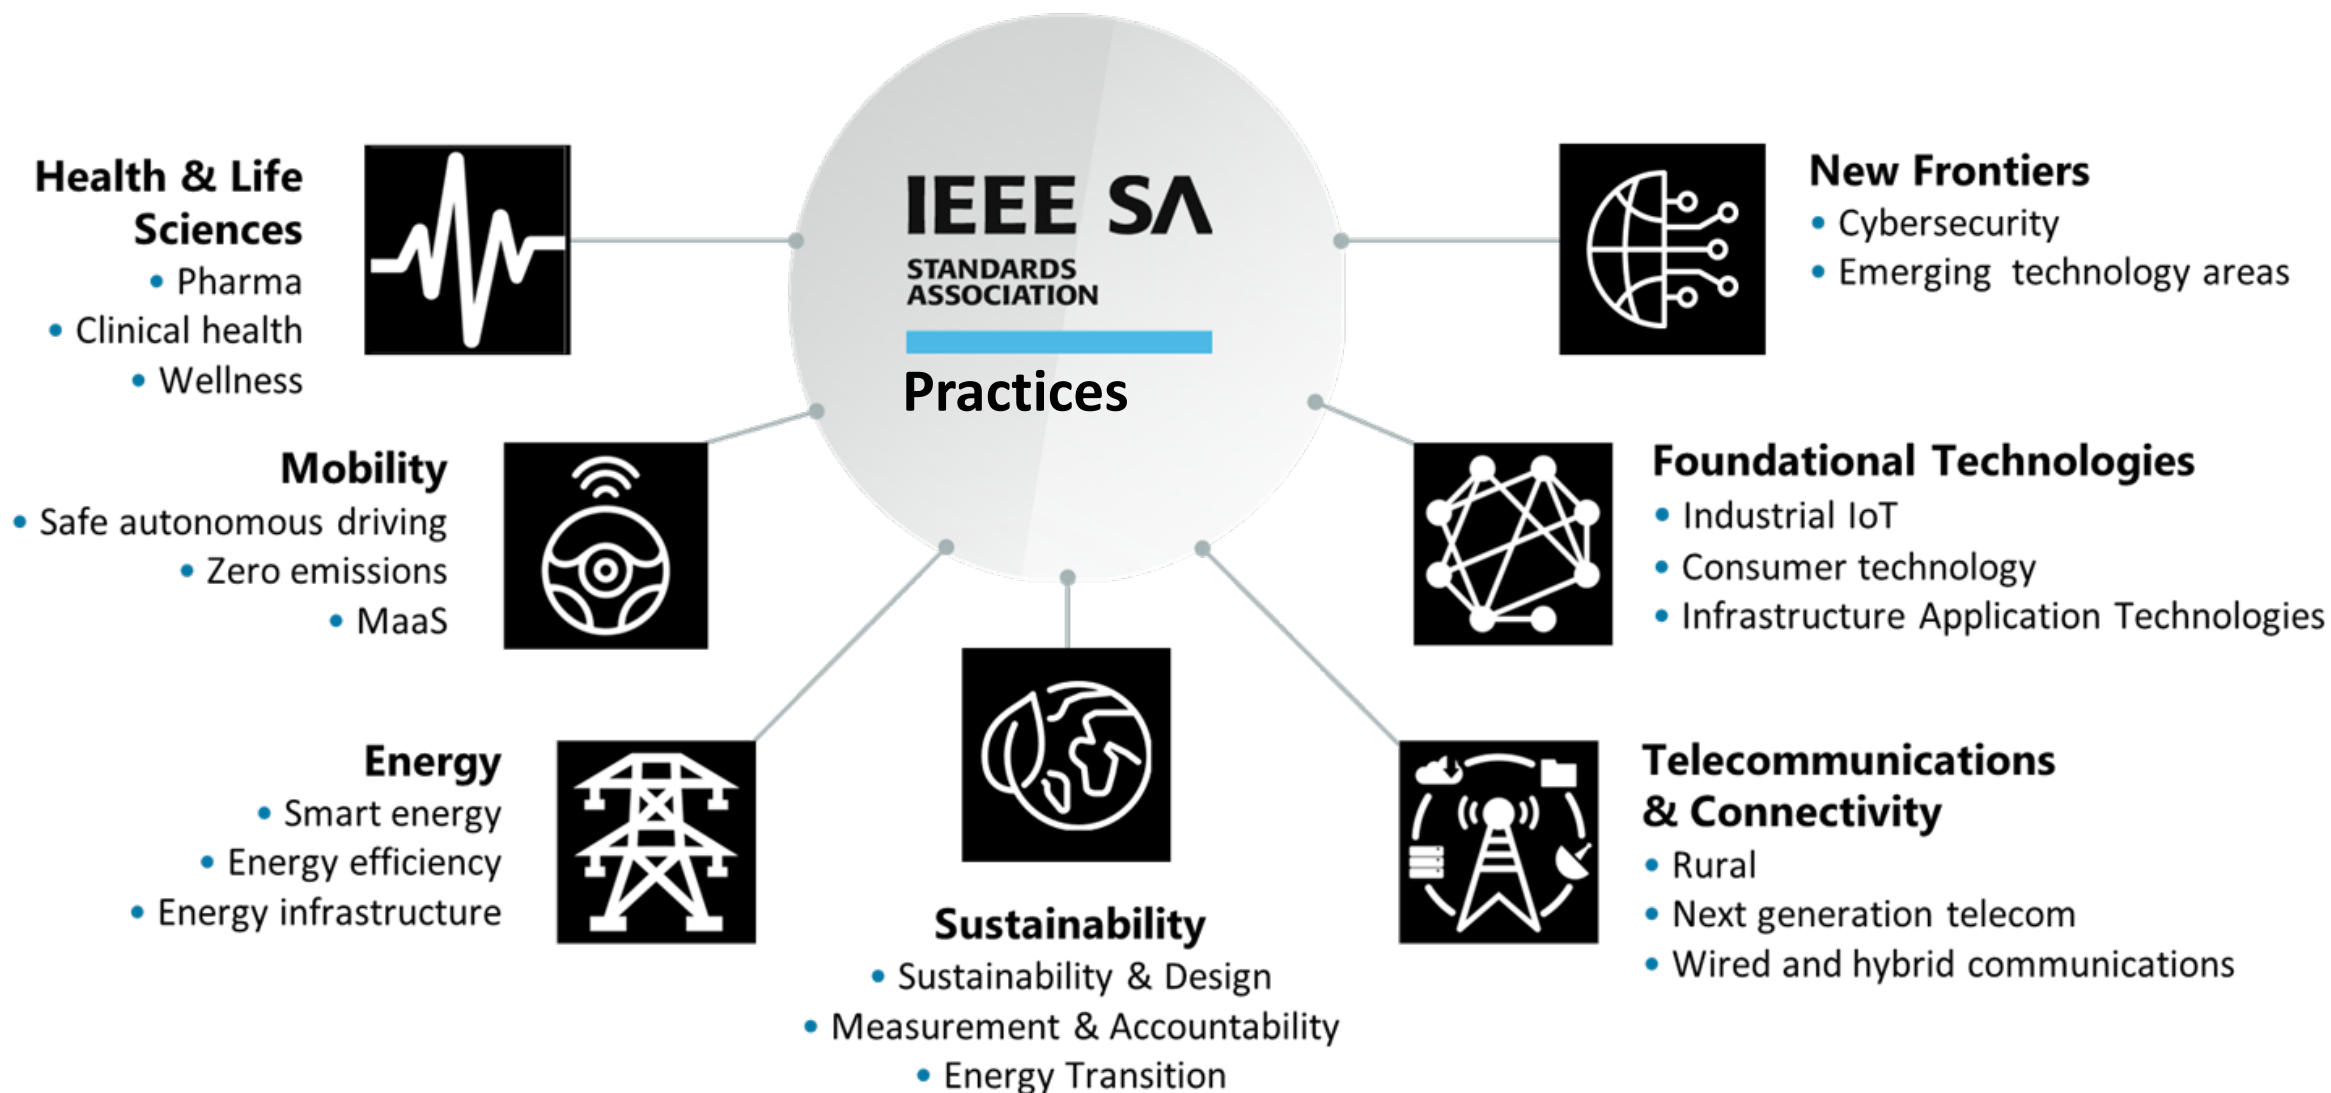

RAISING THE WORLD'S STANDARDS

ABOUT IEEE SA

Developing market relevant open standards and solutions:

- Advancing global technologies and technology platforms
- Promoting innovation
- Protecting public safety, health & wellbeing
- Contributing to a sustainable future

IEEE SA Centers of Competence

STANDARDS AND SOCIAL IMPACT

Our global community is developing sustainable, consensus-based technical standards and solutions for societal issues

Ethical AI Systems

Digital Intelligence

Data Governance

**Dignity and Agency
in Identity**

**Fairness in the
Trade of Data**

**Clean and Sustainable

Child Online Rights

**Connectivity
and Mobility**

IEEE standards span a broad spectrum of technologies

- Aerospace Electronics
- Broadband Over Power Lines
- Broadcast Technology
- Clean Technology
- Cognitive Radio
- Design Automation

- Portable Battery Technology
- Power Electronics
- Power & Energy
- Radiation/Nuclear
- Reliability
- Transportation Technology

- Electromagnetic Compatibility
- Green Technology
- Ethernet/Wi-Fi
- Medical Device Communications
- Nanotechnology
- Organic Components

IEEE SA Portfolio of Programs

Industry Connections

Exploring and incubating new technology and its use

Standardization

Creating markets and protecting public safety through standards development

Membership

Getting connected to experts and resources and enabling advanced participation options

Conformity Assessment & Certification

Providing confidence and assurance and accelerating market adoption

IEEE SA Open

Providing a community-powered platform to support open source projects

Alliance Management Services

Providing program support to alliances and trade associations

Registries

Providing and administering unique identifiers for electronic equipment to support global interoperability

Industry Affiliate Network

Assisting industry organizations in accelerating development and adoption of global standards

Training & Development

Empowering volunteers with the knowledge they need to help ensure their success.

Policy Engagement

Working with government bodies and policy makers on standards, policy & regulation matters

- IEEE Government Engagement Program on Standards (GEPS)
- IEEE SA Standards fellowship Program

I am Committed to a Better World for All

- Personal health devices (PHD)

IEEE 11073 Personal Health Devices Standards Series

Improving Personal Health Device Communications Through Consensus Building

The infographic illustrates a network of personal health devices connected to a central communication hub. The devices include:

- Glucose Meter** (IEEE 11073-10417™)
- Insulin Pump** (IEEE 11073-10419™)
- Weigh Scale** (IEEE 11073-10415™)
- Blood Pressure Monitor** (IEEE 11073-10407™)
- Electrocardiograph (ECG)** (IEEE 11073-10406™)
- Cardiovascular Fitness & Activity Monitor** (IEEE 11073-10441™)
- Body Composition Analyzer** (IEEE 11073-10420™)
- Sleep Monitor** (IEEE 11073-10423™)
- Sleep Apnea Breathing Therapy Equipment** (IEEE 11073-10424™)

These devices are connected to a central communication hub that includes:

- Health Care Manager** (represented by a person with a laptop)
- Physician** (represented by a red cross symbol)
- World Wide Web** (represented by a globe icon)
- Cloud** (represented by a cloud icon)

The communication standards listed are:

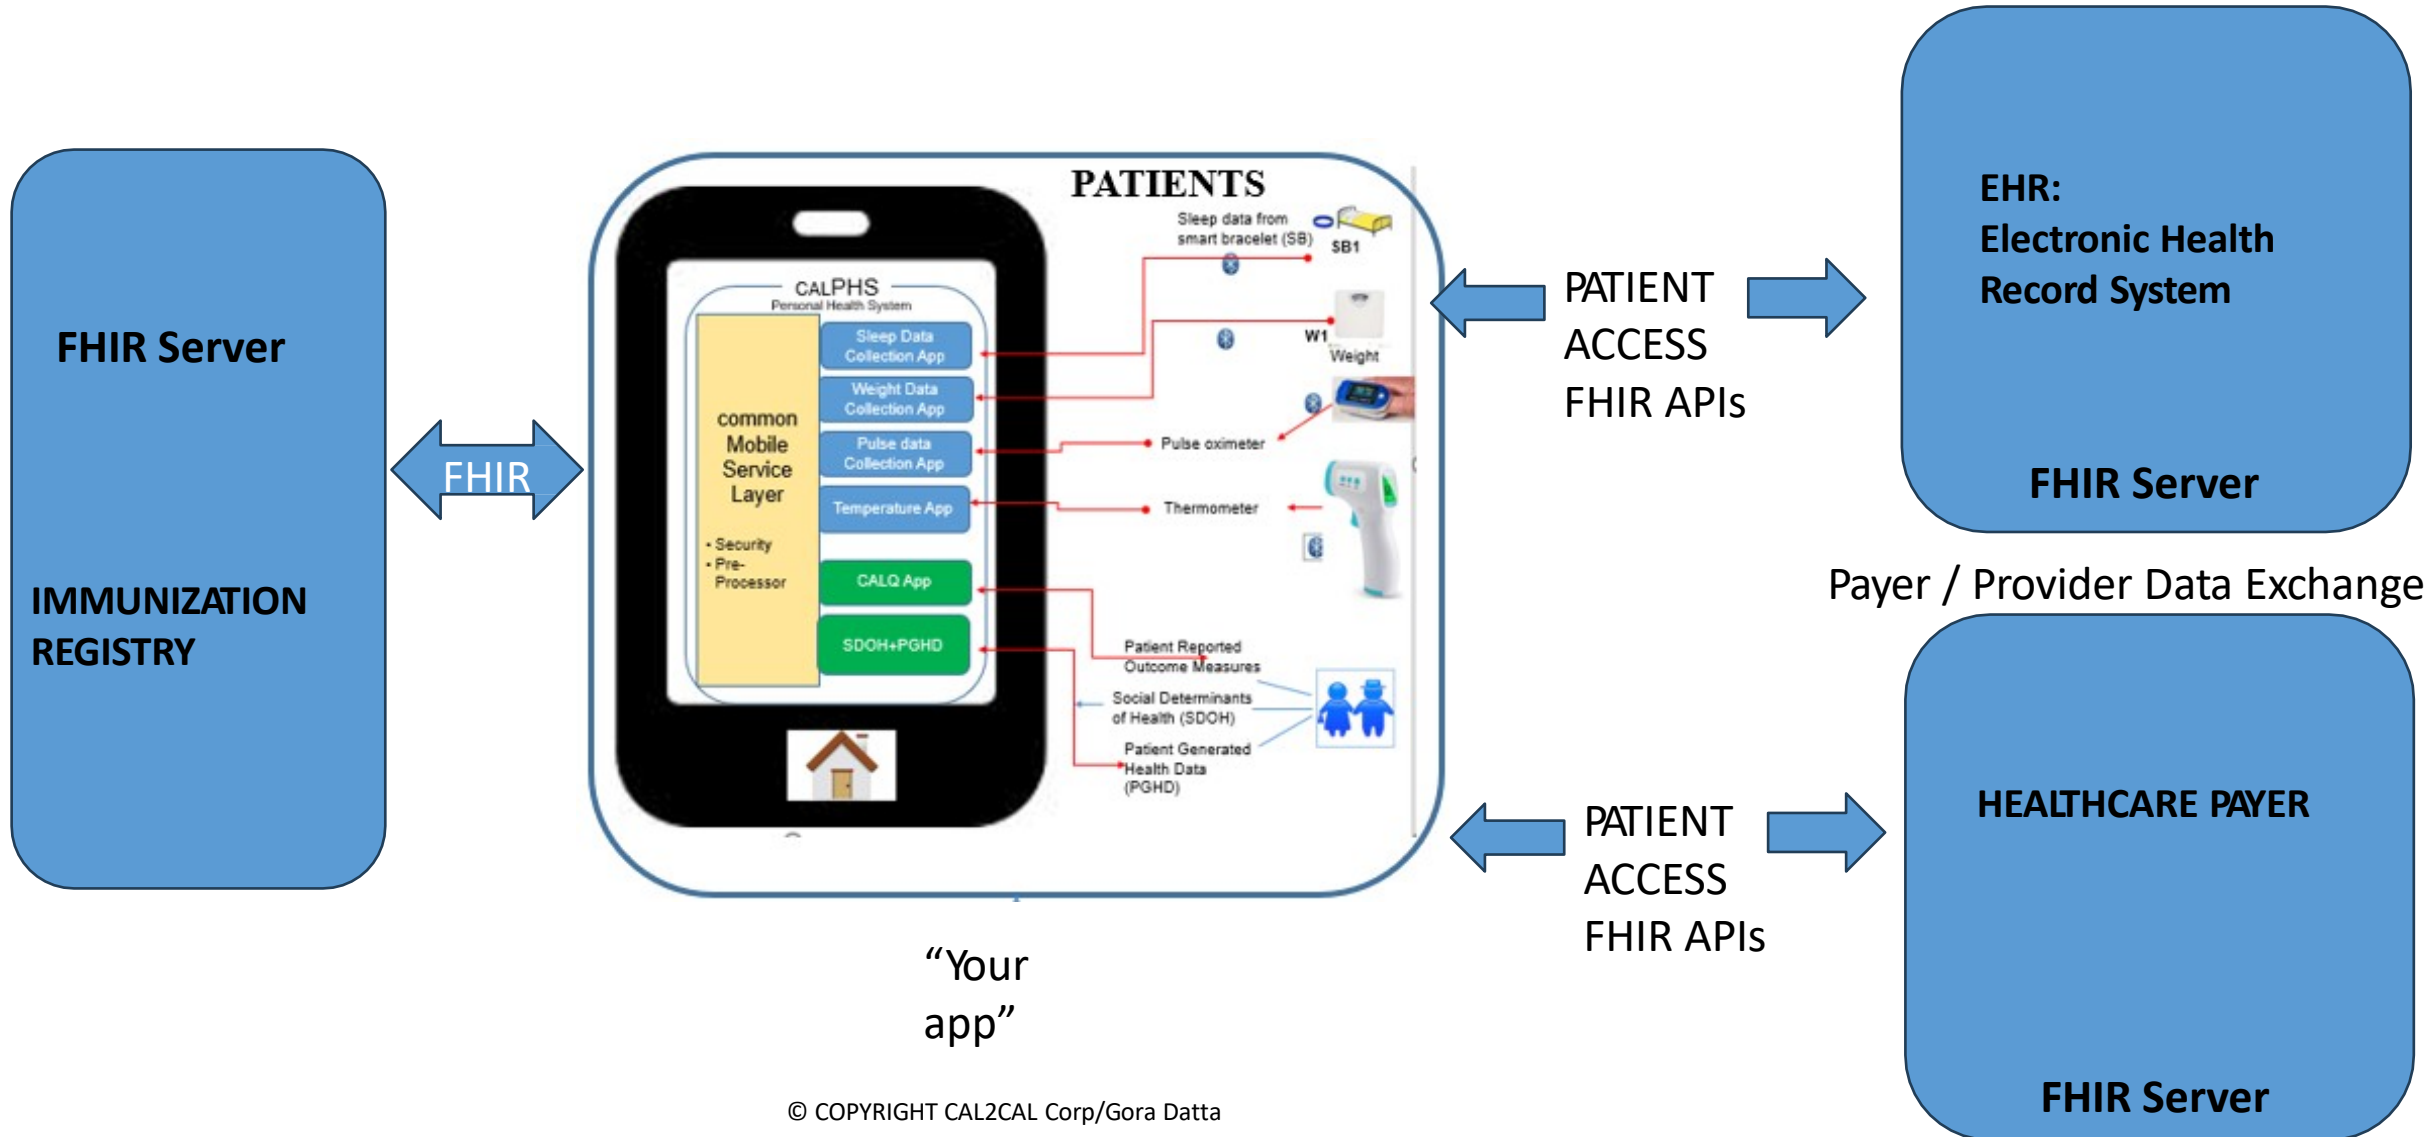

- Connectivity Transports**
 - IEEE 802.3™ (Often referred to as Ethernet)
 - IEEE 802.11™ (Often referred to as WiFi®)
 - IEEE 802.15.1™ (Often referred to as Bluetooth®)
 - IEEE 802.15.4™ (Often referred to as Zigbee®)
 - IEEE 11073-30300™ (Often referred to as Infrared Communications)
 - IEEE 11073-30400™
- Near Field Communications**

IEEE STANDARDS ASSOCIATION

FHIR RESOURCES

FHIR RESOURCES

- Building blocks designed to be easily shareable
- standardized structure, including attributes and relationships,
- self-contained unit of information
 - with a specific structure and
 - defined set of elements that describe different attributes of the data

EXAMPLES

1. **Patient:** Represents a patient's demographic information, including their name, gender, date of birth, and contact details.
2. **Observation:** Represents the result of a clinical observation or measurement, such as a blood pressure reading, laboratory test result, or vital signs.
3. **Medication:** Represents a medication that a patient is prescribed, including details about the medication name, dosage, instructions, and route of administration.
4. **Condition:** Represents a patient's medical condition or diagnosis, along with relevant details such as onset date, severity, and status.
5. **Encounter:** Represents a healthcare encounter between a patient and a healthcare provider or facility, including information about the location, date, reason for the encounter, and participants involved.
6. **Procedure:** Represents a medical procedure or action performed on a patient, including details about the procedure type, date, and related participants.
7. **AllergyIntolerance:** Represents a patient's known allergies or intolerances to specific substances, medications, or foods.
8. **ImagingStudy:** Represents imaging studies like X-rays, MRIs, or CT scans, along with metadata about the study and the images produced.

An Resource Example: PATIENT...(1 of 2)

Name	Flags	Card.	Type	Description & Constraints
Patient	N		DomainResource	Information about an individual or animal receiving health care services
identifier	Σ	0..*	Identifier	Elements defined in Ancestors: id , meta , implicitRules , language , text , contained , extension , modifierExtension An identifier for this patient
active	?! Σ	0..1	boolean	Whether this patient's record is in active use
name	Σ	0..*	HumanName	A name associated with the patient
telecom	Σ	0..*	ContactPoint	A contact detail for the individual
gender	Σ	0..1	code	male female other unknown Binding: AdministrativeGender (Required)
birthDate	Σ	0..1	date	The date of birth for the individual
deceased[x]	?! Σ	0..1		Indicates if the individual is deceased or not
deceasedBoolean			boolean	
deceasedDateTime			dateTime	
address	Σ	0..*	Address	An address for the individual
maritalStatus		0..1	CodeableConcept	Marital (civil) status of a patient Binding: Marital Status Codes (Extensible)
multipleBirth[x]		0..1		Whether patient is part of a multiple birth
multipleBirthBoolean			boolean	
multipleBirthInteger			integer	
photo		0..*	Attachment	Image of the patient

An Resource Example: PATIENT...(2 of 2)

[-] contact	[C]	0..*	BackboneElement	A contact party (e.g. guardian, partner, friend) for the patient + Rule: SHALL at least contain a contact's details or a reference to an organization
[-] relationship		0..*	CodeableConcept	The kind of relationship Binding: Patient Contact Relationship (Extensible)
[-] name	[C]	0..1	HumanName	A name associated with the contact person
[-] telecom	[C]	0..*	ContactPoint	A contact detail for the person
[-] address	[C]	0..1	Address	Address for the contact person
[-] gender		0..1	code	male female other unknown Binding: AdministrativeGender (Required)
[-] organization	[C]	0..1	Reference(Organization)	Organization that is associated with the contact
[-] period		0..1	Period	The period during which this contact person or organization is valid to be contacted relating to this patient
[-] communication		0..*	BackboneElement	A language which may be used to communicate with the patient about his or her health
[-] language		1..1	CodeableConcept	The language which can be used to communicate with the patient about his or her health Binding: All Languages (Required)
[-] preferred		0..1	boolean	Language preference indicator
[-] generalPractitioner		0..*	Reference(Organization Practitioner PractitionerRole)	Patient's nominated primary care provider
[-] managingOrganization	Σ	0..1	Reference(Organization)	Organization that is the custodian of the patient record
[-] link	[?] Σ	0..*	BackboneElement	Link to a Patient or RelatedPerson resource that concerns the same actual individual
[-] other	Σ	1..1	Reference(Patient RelatedPerson)	The other patient or related person resource that the link refers to
[-] type	Σ	1..1	code	replaced-by replaces refer seealso Binding: Link Type (Required)

EVOLVING STANDARDS IN MOBILE HEALTH APP

ISO TS 82304-2: Quality Criteria for Health & Wellness Apps

- Technical Specification about quality criteria for health apps
- doesn't cover the detailed process of an assessment schema

HL7 Standard for Trial Use STU2: cMHAF – consumer Mobile Health App Functional Framework

- cMHAF provides a standard against which a mobile app's foundational characteristics -- including but not limited to security, privacy, data access, data export, and transparency/disclosure of conditions -- can be assessed.
- The framework is based on the lifecycle of an app, as experienced by an individual consumer, from first deciding to download an app, to determining what happens with consumer data after the app has been deleted from a smartphone.

NEW MOBILE HEALTH STANDARD IN THE MAKING

HL7 UMHAI: UNIQUE MOBILE HEALTH APP IDENTIFIER

HL7 UMHAI – newly approved HL7 standard project

- This is a unique identifier that uniquely identifies mobile health application instance as installed on a mobile device.
 - Single User Multiple Devices (e.g., Smart Watch, , CPAP, CGM)
 - Single Device Multiple Users (e.g., Digital Scale, SMBP, Digital Thermometer)
- Related data elements would included Application name, App Builder, version, build number, hosting device, unique identifiers [similar to a Vehicle Identification Number (VIN) used to track and identify individual vehicle BUT much more].
- Unique Mobile Health Application Identifier enables identification of application instance to facilitate recall, maintenance, transparency and traceability.

IN CONCLUSION

- OneAquaHealth project
 - Key Indicators
 - Effective Measures
 - Tools for decision support
- Identification of Gaps in Standards
- Design/development of relevant Standard(s)
 - a consensus driven process

Questions & Answers

WEBINAR

Threats, challenges and innovation technologies for sustainable balance between health of freshwater ecosystems, human health and wellbeing in urban contexts

07.12.2023 15:00 PM CET - 16:30 PM CET

Host: SYNYO GmbH

Empowering Urban Aquatic Ecosystem Monitoring for Global Health: Integrating Ground Data with Earth Observation Methods

George Koutalieris

Chief Innovation Officer
ENORA Innovation
Greece

07.12.2023

UNIVERSITY OF OSLO

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No 101086521.

Definition of Urban Aquatic Ecosystems

Urban aquatic ecosystems include rivers, lakes, streams, and wetlands located in or near urban areas

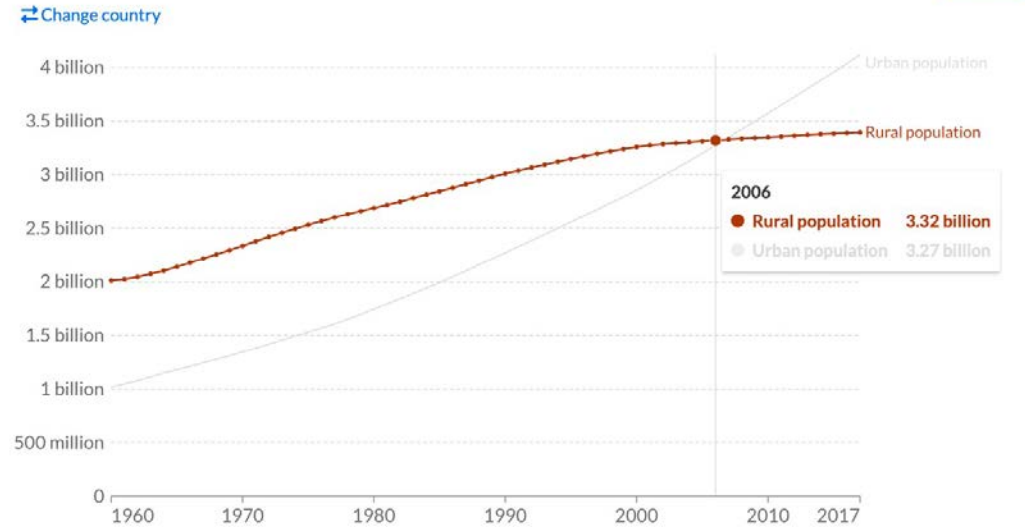

They are vital habitats for various species, supporting rich biodiversity within urban settings

They act as ecological corridors, connecting fragmented natural areas and facilitating species movement

Urban aquatic ecosystems contribute to human health and well-being, offering recreational spaces and improving air quality

They often suffer from pollution, habitat destruction, and the impacts of urbanization, such as impervious surfaces and artificial channelization.

Number of people living in urban and rural areas, World

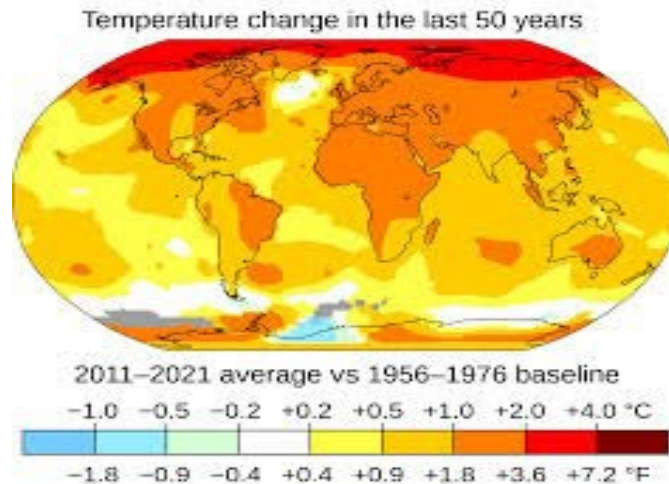

Project priorities

- Foster the use of environmental observation in the large domain of One Health
- Benefit from Earth Observation (EO) technologies
- Increase the capacity to trace environmental parameter changes on how they impact on the emergence of diseases
- Monitor the evolution of ecosystem barriers and reinforcement of their sustainability in densely populated
- Contribute to understanding the emergence and tackling the spread of new infectious diseases affecting human, animal or plant health
- Support the build up of more resilient ecosystems
- Provide better insights to support alerts and early warning systems

Urban stream syndrome

OneAquaHealth

DEGRADED URBAN FRESHWATER ECOSYSTEMS are a source of diseases that affect animals, plants and humans

Human Health

- ❑ Water-borne and vector-borne diseases
- ❑ Public health and social welfare associated to environmental degradation

Temperature change in the last 50 years

2011–2021 average vs 1956–1976 baseline

Climate challenges

Assessing the quality of urban aquatic ecosystems to promote One Health

Identify the parameters related to the health of freshwater ecosystems and human health and wellbeing in urban contexts

Reestablish the balance between nature and humans: improving results in one will result in the improvement of the other

OneAquaHealth 5 Research sites

- A notable achievement:
 - Selection of 100 sampling sites across the 5 research cities for data collection experiments

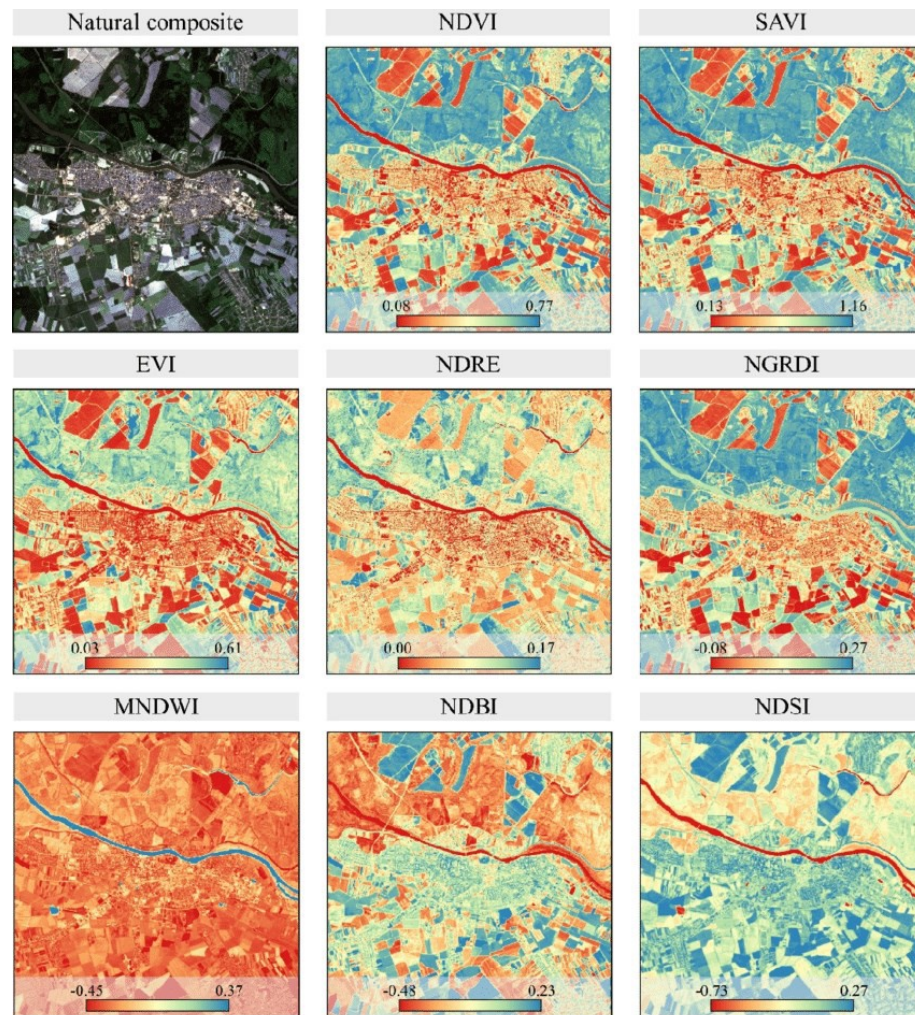

Geotagged scientific data collection

Code	Name	Latitude	Longitude	Existing historical information (which type of information, and dates)
C1	<u>Exploratório</u>	40.19787	-8.42865	Water FQ (conductivity, pH, O2, TSS, N, P compounds, pharmaceuticals), Ecological Assessment, Invertebrates, Diatoms, <u>Hydromorphology</u> (RHS)
C2	<u>Estação Cbr-B</u>	40.22483	-8.44135	Water FQ (conductivity, pH, O2, TSS, N, P compounds, pharmaceuticals), Ecological Assessment, Invertebrates, Diatoms, Birds, Fish, <u>Hydromorphology</u> (RHS)
C3	Vale <u>das Flores</u>	40.19307	-8.41945	Water FQ (conductivity, pH, O2, TSS, N, P compounds, pharmaceuticals), Ecological Assessment, Invertebrates, Diatoms, Birds, Fish, <u>Hydromorphology</u> (RHS)

Figure 3. Photographs of sampling sites in Coimbra

The Role of EO in Ecosystem Monitoring

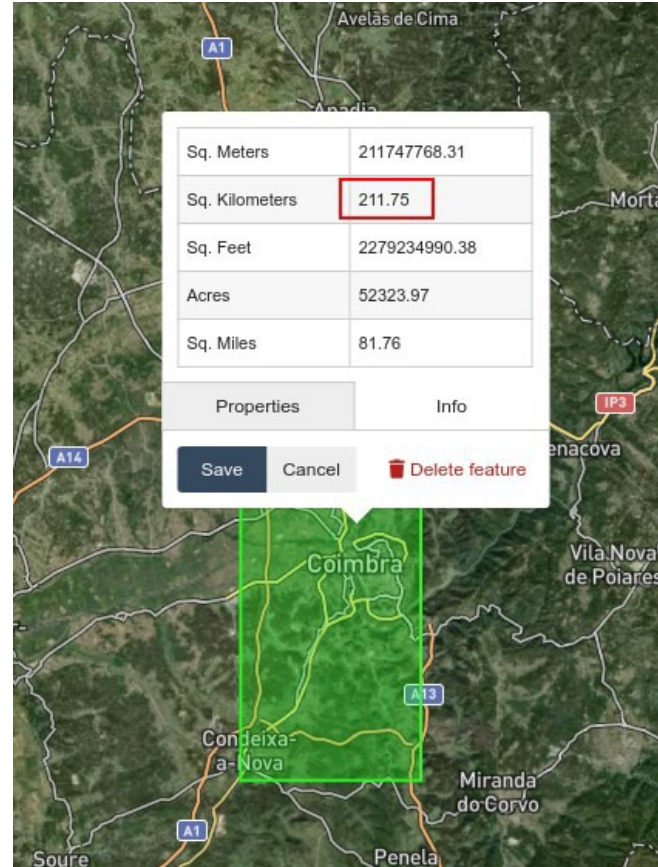

- EO involves the gathering of information about our planet's physical, chemical, and biological systems via remote sensing technologies, such as satellites and aerial sensors.
- It is critical for tracking changes in landscapes, water bodies, and ecosystems over time, allowing for the detection of alterations due to natural processes or human activities
- It provides valuable data on the impact of climate change on urban aquatic ecosystems (rising temperatures, water level changes, and the frequency of extreme weather events)
- EO technologies enable precise spatial analysis of ecosystems, helping to identify areas of ecological significance, pollution sources, and habitat degradation
- Conservation strategies are informed by EO data is to manage natural resources, and to minimize environmental impacts during urban planning

ENORA Innovation

Annotation Tools

- Drawing lines following the stream flow
- Buffer the Aols to include surrounding areas (15m buffer area on each side; 30m wide)
- Annotations are translated into standard GeoJSON format

Challenges of Aols

- Satellite Image resolution (streams are narrow)
 - Lower orbit satellite images (Planetscope)
- Obstructed view due to Urban structures
 - Indirect measurements (vegetation health near streams, soil moisture, ambient temperature, etc)
- Dense vegetation covering the Aol
 - Only a few Aols offer clear view

C13 sampling location in Coimbra. One of the “best” sites in terms of direct view

- Data observations per sampling Location:
 - Including **ecological, biological, riparian & hydromorphological** parameters
- Correlation of EO resources with Ground Measurements:
 - Data integration of **onsite ground measurements with remote sensing**
 - Comprehensive development of the **OAH AI Prediction model for streams health assessment**
- **Development and validation** of the OAH AI Prediction model for streams health assessment

ENORA Innovation in a nutshell

- Established in 2019 in Greece, with a mission to **bridge the gap** between technological innovation and sustainable well-being
- The company is focusing on the **convergence** of EO, IoE, and AI to exploit IT solutions for sustainable energy efficiency practices and enhanced environmental monitoring
- **Product and Software Development:** Known for developing smart device prototypes, AI applications to enhance IoT efficiency, integrating domain-specific data, and advancing AI/ML algorithms while adhering to international quality standards.
- **Environment and Global Health Innovation:** ENORA Innovation is actively involved in projects addressing healthcare transformation (ALAMEDA) and environmental monitoring (RESIST, OneAquaHealth)
- Strengthening **AI-driven environmental monitoring** and to support **climate change resilience**

Questions & Answers

Protecting Urban Aquatic Ecosystems to Promote One Health

Background
Urban aquatic ecosystems are extremely relevant connectors between people, animals and plants, making sites more **resilient and sustainable**. Yet, these ecosystems are often confronted with lack of space, cut of vegetation, artificialization, and other **urbanisation processes**. This degradation can lead to numerous **diseases to humans** in regard to emerging pathogens, decreasing disease resistance, climate change impacts and other **health concerns** in cities.

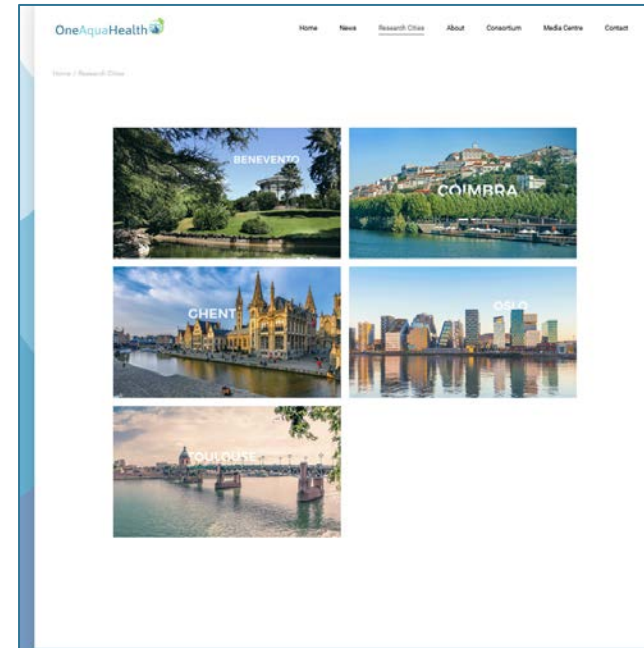

Goal
OneAquaHealth aims to improve the **sustainability and integrity of freshwater ecosystems** in urban environments. By investigating the **interconnection** of ecosystem health and human wellbeing, the project will identify **early warning indicators** and enhance **environmental monitoring** with AI-assisted tools. As a result, the project will support decision makers in finding **adequate and timely decisions** as well as **effective measures** to restore aquatic ecosystem health and **promote OneHealth**.

Concept
By filling knowledge gaps and by adopting the **One Digital Health (ODH)** principles, policy instruments for the management of urban aquatic sites can be improved substantially. The project will develop digital tools – an Environmental Surveillance System, a Decision & Support System and a CitizenScience App to **raise awareness** and to **engage all relevant stakeholders** to jointly achieve **thriving ecosystems** and **healthier communities** for the future.

Project Objectives OneAquaHealth

- UNDERSTAND the links between the health of nature, aquatic ecosystems and human health.
- IDENTIFY the level of integrity of urban aquatic ecosystems, which allow for the maintenance of human health and wellbeing, animal and plant health.
- DETERMINE adequate early warning indicators to assess ecosystem health and predict disease outbreak risks.
- INTEGRATE live Earth observation data to monitor early warning indicators.
- SUPPORT decision-makers with a tool that allows the selection of measures to act upon early warnings.
- ENGAGE stakeholders in the detection of risks contributing to an early warning system.

Our partners of **Ghent University** conducted intensive field work in urban areas of and around Ghent to assess the status of freshwater ecosystems.

In Belgium, expanding urban, industrial and agricultural activities as well as the impacts of climate change are increasingly putting pressure on urban habitats and biodiversity. Read more about the great variety of indicators assessed in the **OneAquaHealth Project** for comprehensive **#environmentalsurveillance** to achieve **#OneHealth!**
